Building Your Own Local AI

Empower your organization's document search with AI

An independent case study on public export and import information from Indonesia's **Directorate General of Customs and Excise (Bea Cukai)** and **Ministry of Finance**. Ask any export or import question in everyday language; every answer cites **the regulation or page it came from**.

The problem

- Export and import rules are spread over **thousands of documents** across **18 ministries and agencies**: regulations, procedures, permits, and service standards.
- Every product follows **its own path**, rules change without notice, and the partner country publishes **in another language**.

How it works

1. You type a question in **everyday language**.
2. The system searches **about 2,000 documents** copied from beacukai.go.id and jdih.kemenkeu.go.id and summarises the most relevant.
3. It shows **evidence cards**: the regulation or page, the quoted passage, and a link to the original on the official website.

What you get

What is import for domestic use, and which document releases the goods?

Import for domestic use is an import for use or ownership by a person or company domiciled in Indonesia, governed by **PMK-190/PMK.04/2022** and **PER-02/BC/2023** [1]. The goods are released with an import declaration (**PIB**) for each transport document, and the importer calculates the duties and taxes owed [2].

1 **FAQ Impor Untuk Dipakai** — FAQ · beacukai.go.id

2 **Impor Untuk Dipakai** — Impor · beacukai.go.id

Example answer, translated from Indonesian. Each evidence card links to the original page on beacukai.go.id.

Why you can trust the answers

- ✓ **Check it yourself.** Every sentence carries a source number, and the original page opens right away.
- ✓ **No making things up.** Answers come only from the indexed documents. If it isn't there, the system says so.
- ✓ **Dated copies.** Every page is stored with its original address and the date it was fetched.
- ✓ **Data stays in the office.** Everything runs on your own computer.

The technology behind it

The system uses **RAG** — *Retrieval-Augmented Generation*: the AI may only answer from the documents it finds. The AI model is interchangeable:

Local — Qwen3 8B on your own computer; questions and documents never leave the office.

Cloud — ChatGPT, Gemini, or Claude, when you want sharper answers.

TRY IT NOW

https://exim.ayolearn.stream

Scan the QR code, or type the address above

Username	`guest`
Password	`i am guest`

The guest account can ask questions and download cited documents.

Try asking

- Which facilities does KITE give to exporters?
- What are the rules for export duty on crude palm oil?
- Which regulation sets import duty rates under the ASEAN Trade in Goods Agreement?

All three already find their sources in the indexed documents.

Key Numbers

1,995	Documents indexed
55K	Searchable passages
8.6M	Words inside

What it can read

PDF · Word · Excel · PowerPoint · Web pages · CSV · Text · Images & scans (OCR)

This demo indexes public content copied from **beacukai.go.id** and **jdih.kemenkeu.go.id**:

Procedures · FAQ · Facilities · Tariffs & rates · Service standards · Finance regulations

Specs: Intel Core i7, 8 GB VGA, 32 GB RAM, 10 GB storage — **≈ IDR 20 million** per unit.
